

Job Discovery & Analysis Report

Prepared for: B.Tech CSE (1st Year), IIMT College of Engineering, Greater Noida

Top Matching Opportunities

Company	Role	Location	Posted Date	Application Link	Match Score	Why It Fits	CTC
Pushpendra Technology Pvt Ltd	Web Developer Intern	Noida, UP	Jun 11, 2026	Apply	85%	Recent posting, web dev role matches your interests, accessible to beginners	N/A
EGlogics Softech Pvt Ltd	UI/UX Intern	Noida, UP	Jun 11, 2026	Apply	78%	Entry-level design/dev role, good for building portfolio skills	N/A
Lendsystem Pvt Ltd	ReactJS Intern	Noida, UP	Jun 3, 2026	Apply	75%	Front-end focus, common first-internship stack	N/A
Zeqo Systems	AI & ML Intern	Remote	May 23, 2026	Apply	88%	Directly matches your AI project work (NutriScope, environmental analyzer) and remote preference	N/A
aiden	AI & ML Intern	Remote	Jun 9, 2026	Apply	88%	Recent posting, AI focus aligns with your project portfolio	N/A
Codermask Tech	WordPress Developer Intern	Noida, UP	Jun 8, 2026	Apply	65%	Beginner-accessible, web dev adjacent, useful for building practical skills	N/A
Flexsin	Intern - Software Engineering	Noida, UP	Feb 19, 2026	Apply	70%	Established product/tech company, broad SE internship suits first-years	N/A
GB Development Services	Flutter Developer Intern	Remote	May 27, 2026	Apply	60%	Remote, beginner-friendly, expands skillset beyond C/web	N/A

Excluded: Roles like "Software Sales Intern," "Business Development Intern," and pure Python/full-time positions requiring stronger prior experience (e.g., BSI Financial Services Software Engineering/Data Science Intern, which targets more advanced candidates) were filtered out as misaligned with your "technical-only, learning-focused" criteria.

Most Commonly Required Skills Across Listings

JavaScript/React (and the MERN stack generally), basic Python, HTML/CSS, Git/GitHub, and familiarity with REST APIs or basic ML libraries (for AI roles) appear repeatedly. UI/UX-adjacent roles often ask for Figma basics.

Skill Gap Analysis

Your current toolkit (C, prompt engineering, GitHub, basic problem-solving) covers the foundational/logic side but not the practical front-end or ML libraries most listings expect. Specifically:

- No JavaScript/HTML/CSS yet — needed for nearly every web/front-end role above.
- No Python — required for most AI/ML internships, even entry-level ones.
- No exposure to frameworks like React or basic ML libraries (scikit-learn, pandas) — these are the actual implementation layer behind your AI project ideas.

Market Demand Insights

For first-year students in the Noida/Delhi NCR region, MERN-stack and React internships are currently the most frequently posted technical roles, followed by AI/ML internships (often remote, smaller startups). Most listed CTC/stipends weren't disclosed publicly (common for early-career postings in this market) — actual stipend ranges typically only appear after application or during interviews.

Recommendations to Improve Interview Chances

Picking up basic HTML/CSS/JavaScript over the next few weeks would open up the largest pool of relevant listings, since front-end internships dominate the local market. For AI/ML roles, learning Python fundamentals alongside one library (pandas or scikit-learn) and documenting it through your existing project work (NutriScope, environmental analyzer) would make your GitHub portfolio much more compelling — recruiters at small AI startups often look at GitHub activity directly rather than relying on formal credentials. Continuing to publicly document the 60-Day AI Challenge with clear READMEs and live demo links (even simple ones hosted on GitHub Pages or Vercel) would also help, since most of these companies are small enough that a strong portfolio link can outweigh lack of formal experience.

Overall Fit Assessment

Your target roles (Software/Web Dev Intern, AI/ML Intern) are realistic for a first-year student in this market — companies posting these are mostly startups and small product firms that explicitly accept limited-experience candidates, matching your stated preferences. Compensation transparency is low at this stage (most stipends aren't listed upfront), so "open to learning-focused opportunities" is a practical and well-calibrated expectation rather than "paid stipend preferred" being a strict filter. The AI/ML remote internships (Zeqo Systems, aiden) are your best-fit opportunities given your existing project work, but applying broadly to the web dev roles too would build the practical coding skills (especially JS/React) that strengthen future AI/ML applications as well.
